

VARI*LITE

VL5LED WASH

USER MANUAL

1 DESCRIPTION

FEATURES

- LED
- 13,000 lumen of output
- 8° to 35° zoom range
- RGBA + Lime + Cyan color mixing
- Blade system
- Ultra compact

Download the product datasheet from the Vari-Lite website at www.vari-lite.com for the full technical specifications.

COMPONENTS

INCLUDED ITEMS

The following illustration shows all items included with the luminaire:

Note: Check with the local Signify Office or Authorized Vari*Lite dealer for availability on accessories.

LUMINAIRE OVERVIEW

The following illustration shows the external luminaire components and controls.

2 INSTALLATION

SPECIAL WARNINGS

EXCEPTIONAL SAFETY INFORMATION FOR THE VL5LED WASH

The light intensity and power density of the VL5LED WASH exceeds that of other fixtures typically used in this application. The warnings and cautions that follow are critically important to the safe operation of this fixture. This product is for commercial use only by trained professionals only.

If you have any questions about the safe installation and operation of the VL5LED WASH, please contact Vari-Lite customer service at VARI-LITE (1-877-827-4548), 1-214-647-7880, or entertainment.service@signify.com.

WARNING: Light Beam Projects Intense Heat. Do not illuminate objects within 15m (49.21 feet) of the VL5LED WASH. Objects within this range can scorch, melt, or ignite from the heat projected by the light beam.

WARNING: High Intensity Light Output. Do not look directly into the light beam. Avoid looking at nearby surfaces illuminated by the beam. It is hazardous to operate luminaires without lens or shield. Shields, lenses, or ultraviolet screens must be changed if they have become visibly damaged to such an extent that their effectiveness is impaired. For example, by cracks, deep scratches, or coating breakdown.

WARNING: Hot Exterior Surfaces. The exterior surfaces of the luminaire can get very hot - up to 120°C (248°F). Do not touch any surface of the luminaire while it is operating. Keep all combustible materials a minimum of 200 mm (7.87 inches) away from the luminaire. To maintain cooling fan operation after the LED is doused, keep the luminaire powered on for 10 minutes. Wait an additional 10 minutes before touching the luminaire.

WARNING: Operating Environment. Do not operate the luminaire when the ambient temperature exceeds 45°C (113°F).

WARNING: Approved LED Type. Use only approved LED types in VL5LED WASH. Users can check the latest version of Vari-Lite Technical Notice TN-248, on the Vari-Lite web site, for all approved LED. Power and Data Cabling Requirements

POWER AND DATA CABLING REQUIREMENTS

POWER

The luminaire requires standard AC power distribution from AC100-240V~, 50/60Hz. Current required depends on the AC supply voltage and product model.

NOTE: The mating Neutrik PowerCon connector is supplied, however, you will need to purchase or construct a cable appropriate for your application. Allow one hour warm up if ambient temperature is below 10°C (50°F).

CONNECTING POWER

Depending on the application, the luminaire's AC input cable may require a different connector. If required, install a new connector meeting your requirements using the following wire color code reference:

WIRE*	CONNECTION
green	Ground (earth)
white	AC neutral
black	AC line

*International (harmonized) standard

WARNING: DO NOT connect to three-phase service in countries with 240 volt power.

For single-phase power at 240V RMS:

CONNECTION	PIN
AC neutral	N
AC line	L
Ground (earth)	G

WARNING: It is not recommended to power any Vari-Lite luminaire from a dimmer - even in 'NONDIM' mode. Dimmer and non-dim modules are not suitable sources of power because their output modifies the AC wave form. This may work for a short time, but will eventually result in power problems, luminaire mis-operation and/or failure and may void the luminaire's warranty.

DMX TERMINATION CONNECTOR

A DMX termination connector is required at the last luminaire (or "far end of the line") to prevent signal reflections. Signal reflections may cancel out the signal at certain line lengths, resulting in errors. The terminator is also necessary for software downloads and running tests on multiple luminaires. To construct your own connector, you will need a 5-pin, male XLR connector.

NOTE: A DMX termination connector assembly is available as an accessory from Vari-Lite.

INSTALLATION PROCEDURES

HANGING THE LUMINAIRE

The VL5LED WASH can be hung horizontally or vertically from any structure designed to work with the type of load created by this moving luminaire. Two mounting truss hooks or other mounting hardware are required. Many compatible truss hooks are available from different manufacturers for your particular needs. A minimum of two hooks per luminaire is required. If mounting method does not use truss hooks, two attachment points, per luminaire, are required.

To install mounting hardware and brackets:

- Step 1. Install truss hooks on two provided truss hook brackets as required.
- Step 2. Determine required configuration of bracket installation. Brackets may be installed in many different orientations.
- Step 3. While pulling up on locking mechanism release, fit keyed holes onto raised mounting buttons at bottom of enclosure. Slide forward and release locking mechanism to lock in place. Ensure brackets are locked securely.

WARNING: Ensure that the bracket locking mechanism is fully seated after the bracket is installed on the luminaire.

FLOOR MOUNTING THE LUMINAIRE

All luminaires included in this manual are designed to sit directly on its base in a floor installation application. When used in this type of application, be sure to leave enough space around the luminaire to allow proper, unin-

errupted airflow for cooling and movement.

WARNING: Light beam projects intense heat. Do not illuminate objects within 15m (49.21 feet) of the VL5LED

Fit bracket's keyed hole and locking mechanism over raised mounting buttons and slide forward.

WASH. Objects within this range can scorch, melt, or ignite from the heat projected by the light beam.

CONNECTING DATA AND POWER

A maximum of 16 luminaires may be connected in any one DMX data link.

NOTE: This maximum limit applies to the luminaire “daisy chain” only. Your system or console may require fewer luminaires on a single data link path. Consult your console documentation for more information.

To connect power and data:

- Step 1. Connect data cable from console to first luminaire in chain at DATA IN connector.
- Step 2. If required, connect additional data cables from DATA THRU connectors to DATA IN connectors of remaining luminaires in link.
- Step 3. At last luminaire in link, install male termination connector at DATA THRU connector. (Luminaires and other devices on the same DMX chain may not function properly without termination.)
- Step 4. Connect AC Input Cable connector to power input source.
- Step 5. Dress AC input and data cables and secure them so that they will not interfere with luminaire head and yoke movement.

POWERING UP

POWER UP AND CONFIGURATION PROCEDURE

The internal color, gobo, and beam mechanisms will also move through a full range of motion. After calibration, the luminaire head will either stop at its “home” position (which positions the pan axis at mid-rotation and the head parallel to the yoke with the lens pointing away from the luminaire upper enclosure) or move to its current DMX-defined position if DMX data is present. All internal mechanisms also move to their “home” or DMX-defined positions.

Subsequently, depending on the luminaire’s setting for Power-Up State (refer to “VL5LED WASH Menu System Function Chart” on page 45).

CAUTION: Before applying power, be sure the luminaire is hung or positioned so that the head and yoke can move freely without restriction. Make sure service tilt and pan locks are disengaged so luminaire moves freely.

To power up:

- Step 1. At each luminaire, apply power by connecting luminaire to input power source (100 to 240VAC). Luminaire will cycle through calibration and stop at “home” position.

ADDRESSING

PROGRAM STARTING ADDRESS

The address setting for DMX console controlled systems is entered using the Menu Display. The luminaire retains the DMX address even if power is removed.

NOTE: Refer to your console operating instructions for specific information regarding its addressing requirements.

To program a DMX starting address:

- Step 1. Power unit on (either via mains or battery)
- Step 2. Press [ESC] to access menu
- Step 3. Press [▲] or [▼] to access ADDRESS and press [OK].
- Step 4. Use [◀] or [▶] to move cursor to Hundreds, Tens or Ones...then press [◀] or [▶] to select desired digit. Note it will scroll from 9 to 0 or 0 to 9. Once all three digits are set, press [OK] to accept.

PROGRAM STARTING ADDRESS WITHOUT CALIBRATING LUMINAIRE

It is possible to bypass the calibration sequence and go directly to the Menu Display programming in order to pre-program an address setting.

To program starting address without calibrating luminaire:

- Step 1. While powering up luminaire, press and hold
- Step 2. Program address as in Program Starting Address above.
- Step 3. Press and hold until display changes to the DMX address.
- Step 4. Alternatively, boot via battery. Press [ESC] and [OK] the same time until display boots

NOTE: The luminaire requires a reset to restore control.

3 DMX MAPPING

The following tables assumes a DMX start address of 1. When a different starting address is used, this address becomes channel 1 function and other functions follow in sequence.

TABLE 1. SMART COLOR CONTROL

DMX CHANNEL BLADE LED GROUP			PARAMETER	DEFAULTS	RANGE	DESCRIPTION
0	1 (DEFAULT)	16				
1	1	1	Intensity High	0	0-65535	16-bit control of dimming
2	2	2	Intensity Low

176 - 255	Reserved Values		N/A	Hold Setting	Resets to Default	Resets to Default	Yes

To use control channel functions:

- Step 1. Select an action to be sent.
- Step 2. Set control channel value for desired action (for example, 6 for ReCal). Hold value for 3 seconds.
- Step 3. Set control channel value to zero. (This must occur without any scaling values. Action will be voided if other values are detected between action value and zero.)

NOTE: A numerical keypad is suggested for sending values. An encoder or fader does not allow for a quick value change, which is required to effect the control functions.

COLOR MIXING

The color mixing mechanism is made up of six graduated color flags: red, green, blue, amber, lime and cyan. These flags provide full-spectrum color cross fades from pastel to saturated color.

TABLE 10. DMX MAP FOR RED, GREEN, BLUE, AMBER, LIME, AND CYAN

TIMING

TIMING CHANNEL INFORMATION

Timing channel control improves the timed moves of certain groups of parameters. We provide up to three timing channels - Focus (pan and tilt), Color Time (color parameters), and Beam Time (beam parameters).

Types of timing control:

- Timing Control Channel: the luminaire uses its timing channel value to calculate a smooth continuous movement for a given time and transition.
- Console Timing: the console calculates the time duration between the DMX increments to be sent for a given time and transition.

GUIDELINES:

- Timing channels support time values of up to six minutes.
- To use a timing channel instead of console timing, it is necessary to set the timing channel to the desired value and set cue and/or parameter time to zero. A combination of time controls can produce unexpected results.
- The default value setting in the profile should be 255 (proportional control) to allow smooth movement when using console timing.
- The timing channel data should change as a snap. A zero value will give the fastest move, however, without any smoothing this can appear “steppy” in console timed moves.

NOTE: Some parameters have been excluded from the timing channels. Wheel spin and gobo rotation rate changes are not affected by timing channels.

TABLE 13. CHANNEL FUNCTION / TIMING CHANNEL RELATIONSHIP

DMX LED GROUP		PARAMETER	DEFAULT	RANGE	DESCRIPTION
1	16				
25	25	Focus Timing	255	0 - 255	See timing table
26	26	Color Timing	255	0 - 255	See timing table
27	27	Beam Timing	255	0 - 255	See timing table

A timing value of zero is full speed. A time value of 100% (or DMX 255) enables the associated parameter(s) to follow cue fade time (console time) rather than the timing channel.

NOTE: The particular storing syntax for your console, as well as instructions on how to write part cues, can be found in the operation manual for that console.

To use these channels, you must:

- Step 1. Create the cue, including color and frost as required.
- Step 2. Decide which fixtures and which parameter groups will use timing channels.
- Step 3. Assign a value to the particular timing channel(s) you wish to use (for timing information, see chart on next page).
- Step 4. Set console timing (or cue fade time) for parameters and timing channels to zero seconds.
- Step 5. Store cue.

NOTE: Avoid changing timing channel values in a fading cue. This can cause unexpected behavior in the luminaire as the timing channel value is updated over time. Timing channel values and the final destination of the parameters affected by the timing channel should always be sent in a zero count.

Timing channels can be set in either % or 0-255(DMX) modes, with the following values assigned:

TABLE 14. TIMING CHANNEL

4 OPERATION

UPDATING SOFTWARE

TRANSFERRING SOFTWARE BETWEEN LUMINAIRES

It is possible to transfer specific software versions between luminaires. As in the case of installing new software versions, multiple luminaires can be programmed at the same time if they are data linked together (refer to [Connecting power on page 4](#)), however a maximum of 16 luminaires can be updated at once.

HARDWARE REQUIREMENTS

A DMX termination connector is used in this process. Refer to page 16 for more information regarding the construction of this connector.

To transfer software versions between luminaires:

- Step 1. At last luminaire, install DMX termination connector into DATA THRU XLR connector.
- Step 2. At master luminaire (first in chain) Menu Display, press [ESC].
- Step 3. Press ▲▼◀▶ arrows until Fixture appears.
- Step 4. Press ▲▼◀▶ arrows until Crossload appears. Press [OK].
- Step 5. Unplug DMX From Console? will be displayed. Press [OK] to accept.
- Step 6. Once download is complete, luminaire automatically recalibrates. Once recalibration is complete, recalibrate luminaire one additional time.

To Verify software version at luminaire:

- Step 1. At Menu Display, press [ESC].
- Step 2. Press ▲▼◀▶ arrows until Fixture appears. Press [OK].
- Step 3. Press ▲▼◀▶ arrows until Version appears. Press [OK].
 - Part 1 of the version displays as VXXX.
 - Press to display part 2 of version. This displays as a date (MM/DD/YY). For example, 12/25/ 19 (December 25, 2019). Press to display part 3 of version. This will be displayed as a time (HH:MM). For example, 16.36 (4:36 pm).

5 MENU SYSTEM

MENU OPERATION

WHAT IS THE MENU SYSTEM?

The menu system is a programmable set of commands used to configure, address, operate, and test the luminaire. The menu system is controlled at the Menu Display available at the enclosure input panel.

CONTROLS OPERATION

The menu system is controlled by [ESC], [OK], and four ▲▼◀▶ Arrow buttons.

The arrows will have opposite functions if the luminaire is hung upside down in a hanging orientation due to the automatic orientation feature. In other words, the arrow pointing downward always functions as down/decrease and the arrow pointing upward always functions as up/increase regardless of the luminaire orientation.

DEFAULT STATE

The menu display's default state during normal operation is to display the DMX address. After 40 seconds of inactivity at the display, it will change to the default state.

After longer periods of inactivity, the menu display will switch to its off state. The default state for this feature is 30 seconds, however, different time lengths can also be programmed.

To program a different time length for menu off feature:

- Step 1. Press [ESC] access the main menu.
- Step 2. Once enabled, the menu will function as normal with only the following sub-menu sections active:
 - Address
 - Configure
 - DMX
 - Fixture
 - Manual Control
 - Test
- Step 3. Press ▲▼◀▶ choose the "Configure", and press [OK].
- Step 4. Press ▲▼◀▶ choose the "Display", and press [OK].
- Step 5. Press ▲▼◀▶ choose the "On Time", and press [OK].
- Step 6. Press ▲▼◀▶ choose "30 Sec", "5 Min", "10 Min", "On" when you need.

MENU FUNCTIONS

For easy reference, each possible menu item is listed alphabetically in the first column by its display abbreviation. The second column follows with a definition of the abbreviation and then a third column provides an explanation of its purpose and function.

APPENDIX A

CARE AND MAINTENANCE

SERVICE MENU ITEMS

To Set Position Cal (Tilt example)

- Step 1. Step 1. Press [ESC] access the main menu.
- Step 2. Press choose the “Fixture”, and press
- Step 3. Press choose the “Service”, and press .
- Step 4. Press choose the “Service Setting”, and press
- Step 5. Press choose the “Set Position Cal”, and press
- Step 6. Press choose the “Tilt”, and press .

Set Manual Mode Color Preset:

- Step 1. Press access the main menu.
- Step 2. Press choose the “Manual Mode Color Preset”, and press
- Step 3. Press choose the “User Preset Setting”, and press . Step 4. Press choose “Intensity*”, “Red”, “Green”, “Blue”, “Amber”, “Lime”, “Cyan”, “Pan”, “Tilt”, “Zoom”, “Frost”, “Store (User Preset)”, “Clear”
- Step 4. Press to accept and store the gobo offset setting or to cancel the gobo offset.

SELF-TESTS

RUNNING PARAMETER TESTS

The luminaire is capable of running self-tests by using the Test menu functions.

When running tests on multiple luminaires, a DMX termination connector is required at the last luminaire in the link. Refer to “Connecting Data and Power” on page 14 for more information regarding the construction of this connector.

NOTE: After 10 seconds of inactivity, the menu display will change to the default state showing the address.

WARNING: All maintenance procedures are to be performed with power removed from the luminaire. Never remove covers or back cap while LAMP is in operation.

EQUIPMENT HANDLING

Below are some basic tips and information on handling luminaires and their associated components.

LOCATIONS/USE

Vari-Lite luminaires are designed for dry locations only. Exposure to rain or moisture (including, but not limited to, fog machines, misters, etc.,) may damage luminaire.

SOLID STATE ELECTRONICS

Electrostatic Discharge (ESD)

Electrostatic discharge (ESD) presents a significant danger to solid state electronic components (semiconductor devices and PC board assemblies). Static electricity can build on a variety of common objects (including people) simply by handling or moving. ESD rarely results in immediate failure of a component, but shows up later as an intermittent problem or severely reduces the life of the component. All Vari-Lite equipment uses solid state electronics and appropriate precautions to protect them should be observed when servicing.

Printed Circuit Boards (PCBs)

All PC boards should be shipped in electrostatic shielding bags. When handling PC boards or components, devices such as conductive mats and conductive wrist straps should be used whenever possible. If these precautionary devices are not available, handling of PC boards and components should be avoided.

CAUTION: Black foam (used to package solid state electronics) should never be used for packing batteries or put in contact with PC boards which contain batteries.

TROUBLESHOOTING

ERROR MESSAGES

If a problem occurs during luminaire calibration, at the end of the calibration sequence the Menu Display will cycle through any applicable error message(s) until the end of the list is reached. To review the error messages again, it will be necessary to access them using the Status function.

To access error messages:

- Step 1. Press
- Step 2. Press arrows until Fixture appears. Press
- Step 3. Press arrows to access Status. Press . (Display will now scroll through any error messages or display OK if no errors.)

TABLE 16. ERROR MESSAGES

DISPLAY	MESSAGE	TYPE
No Errors	No Errors Found	Recalibrate fail
Pan	Pan motor recalibrate fail	
Tilt	Pan motor recalibrate fail	
Zoom	Zoom motor recalibrate fail	
Frost	Frost motor recalibrate fail	

Visit the product page of our website at www.vari-lite.com for the latest technical specifications.

HOW TO OBTAIN WARRANTY SERVICE

A copy of the Vari-Lite Limited Warranty was included in the shipping package for this Vari-Lite product.

To obtain warranty service, please contact customer service at 1-214-647-7880, or entertainment.service@signify.com and request a Return Material Authorization (RMA) for warranty service. You will need to provide the model and serial number of the item being returned, a description of the problem or failure and the name of the registered user or organization. If available, you should have your sales invoice to establish the date of sale as the beginning of the warranty period. Once you obtain the RMA, pack the unit in a secure shipping container or in its original packing box. Be sure to clearly indicate the RMA number on all packing lists, correspondence, and shipping labels. If available, please include a copy of your invoice (as proof of purchase) in the shipping container.

With the RMA number written legibly on or near the shipping address label, return the unit, freight prepaid, to:

Vari-Lite

Attention: Warranty Service (RMA# _____)

10911 Petal Street

Dallas, Texas 75238

USA

As stated in the warranty, it is required that the shipment be insured and FOB our service center.

IMPORTANT! When returning products to Vari-Lite for repairs (warranty or out-of--warranty) from a country other than the USA, "Strand Lighting LLC", must appear in the address block as the Importer of Record (IOR) on all shipping documentation, Commercial Invoices, etc. This must be done in order to clear customs in a timely manner and prevent returns.

COMPLIANCE

This equipment has been tested and found to comply with the limits for a Class A digital device pursuant to Part 15 of FCC Rules. These limits are designed to provide reasonable protection against harmful interference when this equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with Vari-Lite system, service, and safety guidelines, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference, in which case the user will be required to correct the interference at his/her own expense.

DECLARATION OF CONFORMITY

We declare, under our sole responsibility, that this product complies with the relevant clauses of the following standards and harmonized documents:

SAFETY

EN 60598-1:2015 + A1:2018;
EN 60598-2-17:2018;

EN 61000-3-3:2013
EN 55015:2013+A1:2015
EN 61547:2009
EMC Directive 2014/30/EU

ROHS

EN 62321:2012
We certify that the product conforms to the protection requirements of council directives: Low Voltage Directive 2014/35/EU, 2014/30/EU (EMC), and Restriction of the use of certain Hazardous Substances in electrical and electronic equipment Directive (RoHS), 2015/863. Equipment referred to in this declaration of conformity was first manufactured in 2017 in compliance with these standards.

CUSTOMER SERVICE

If you have any questions regarding this product, please contact Customer Service at +1-214-647-7880 or via e-mail at entertainment.service@signify.

LIMITED 2-YEAR WARRANTY

Vari-Lite offers a two-year limited warranty on its control products against defects in materials or workmanship from the date of delivery. A copy of Vari-Lite two-year limited warranty containing specific terms and conditions can be obtained from the Vari-Lite website at www.vari-lite.com or by contacting your local Vari-Lite office.

SAFETY WARNINGS AND NOTICES

When using electrical equipment, basic safety precautions should always be followed including the following:

READ AND FOLLOW ALL SAFETY INSTRUCTIONS.

- For indoor, dry locations use only. Do not use outdoors.
- Equipment should be mounted in locations and at heights where it will not readily be subjected to tampering by unauthorized personnel.
- The use of accessory equipment not recommended by the manufacturer may cause an unsafe condition.
- Not for residential use. Do not use this equipment for other than intended use.
- Refer service to qualified personnel.
- The use of accessory equipment not recommended by the manufacturer may cause an unsafe condition.
- Not for residential use. Do not use this equipment for other than intended use.
- Refer service to qualified personnel. This fixture contains no user serviceable parts.
- Prior to first use, carefully inspect unit for damage from shipping.
- Installation and operation to be performed by qualified personnel only.
- Use safety tether when mounting.
- Install only in locations with adequate ventilation of at least 50cm clearance from adjacent surfaces.
- Ensure sure that ventilation slots are not blocked.
- Ensure that the voltage and frequency of the power supply match the power requirements of the fixture.
- The fixture must be earthed/grounded to the appropriate conductor.
- Do not operate fixture outside the ambient temperature range of 0-40°C.
- Do not connect the fixture to any dimmer pack.
- New fixtures may emit a chemical odor due to the manufacturing process. This odor will dissipate over time.
- Note distance requirement(s) from combustible materials or illuminated objects. Do not mount near gas or electric heaters.
- Prior to each use, carefully inspect power cables and replace any damaged cables.
- Exterior surfaces of the luminaire will be hot during operation. Take appropriate precautions.
- Continuous use of the fixture may shorten the lifespan. Power down the fixture when not in use.
- Clean fixtures regularly, particularly when working in a dusty environment.
- Never touch power cables or wires while the fixture is powered on.
- Avoid entangling power wires with other cables.
- In the event of a serious operating problem, immediately discontinue using the fixture.
- Never turn on and off the unit time after time.
- The housing, lenses, and/or the ultraviolet filter must be replaced if they are damaged.
- Disconnect mains power if the fixture is not used for a long time.
- Original packing materials can be reused for transporting the fixture.
- This fixture is designed for dry locations only. Exposure to rain or moisture may damage fixture unless it is suitably IP rated.
- Do not look directly at the LED light beam while the fixture is on.
- Equipment should be mounted in locations and at heights where it will not readily be subjected to tampering by unauthorized personnel.

SAVE THESE INSTRUCTIONS.

WARNING: Refer to National Electrical Code® and local codes for cable specifications. Failure to use proper cable can result in damage to equipment or danger to
